(54) INFORMATION RELAY PROCESSING DEVICE
AND METHOD THEREFOR

COPYRIGHT: (C)2000,JPO

(57) Abstract:

PROBLEM TO BE SOLVED: To have a user receive information service without the user's inputting set information while securing security of set information for using an information provision means.

SOLUTION: Only a user who uses a information relaying processor can access an information provision means by using this information relaying processor which converts inputted definition information into set information for using the information provision means. Also, by enabling use of this information relaying processor by inputting a peculiar password in using the information relaying processor, a regular user is able to access the information provision means only when he uses this information relaying processor. Also, the user can use the information provision means without inputting the set information for using the information provision means by converting the inputted definition information into the set information for using the information provision means.
